<b>PUBLISH DATE</b>	<b>UPDATES</b>
January 2007	Initial release of the Automated Recurring Billing (ARB) API
August 3, 2007	Updated description for response code E00012
September 24, 2007	No end date/Silent Post URL updates
May 2008	Removal of SecureSource requirements and various updates

# Section 1

## Developer Introduction

---

This guide describes the Web development required to submit Automated Recurring Billing™ (ARB), or subscription-based, payments to the Authorize.Net Payment Gateway directly from a Web site or other application using extensible markup language (XML).

Specifically, the Authorize.Net ARB Application Programming Interface (API) provides a mechanism for developers and value added resellers (VARs) to create, update and cancel ARB subscriptions via direct integration between client software or applications and the Authorize.Net Payment Gateway.

A subscription is a set of multiple transactions, or payments, created for the purchase of a subscription-based product or service or for an installment-based payment plan. Payments for the subscription are then generated by the payment gateway at later dates based on a specified payment schedule and subscription duration.

The behavior of the ARB API is the same as when a merchant creates, updates, and cancels ARB subscriptions in the Merchant Interface. When a merchant creates a subscription in the Merchant Interface, they enter all required information (customer payment information, subscription interval and duration, etc.) into the Create New ARB Subscription form. When the merchant submits the information, the Subscription Confirmation page returns a message to the merchant regarding whether or not the subscription was created successfully. The subscription ID assigned for a successfully created subscription is also displayed.

The ARB API accomplishes these same functions through an XML call and subsequent XML response. Whether a subscription is created in the Merchant Interface or through the ARB API, the results are the same.

---

**Note:** You may want to log into the Merchant Interface to step through the manual ARB process. You can request a developer test account from our Integration Center at <http://developer.authorize.net/testaccount>. Be sure to include in the comments section that you need the ARB feature enabled for your test account. If you already have a test account, please email [integration@authorize.net](mailto:integration@authorize.net) to request that ARB be enabled for your test account.

---

### Minimum Requirements

Before you begin ARB integration for an Authorize.Net Payment Gateway account, please check with the merchant to make sure that the following minimum requirements have already been met.

- **The merchant must have a merchant bank account that allows Internet transactions.**

- **The merchant must have an active Authorize.Net Card Not Present Payment Gateway account.**
- **The merchant must be signed up for the Authorize.Net ARB service.**
- **The merchant must store account authentication data securely (for example, API login ID, transaction key).**

---

**Note:** Merchants should avoid storing any type of sensitive cardholder information. However, in the event that a merchant or third party must store sensitive customer business or payment information, compliance with industry standard storage requirements is required. Please see the *Developer Security Best Practices White Paper* at <http://www.authorize.net/files/developerbestpractices.pdf> for guidelines.

---

## Developer Support

There are several resources available to help you successfully integrate a merchant Web site or other application to the Authorize.Net Payment Gateway.

- + The Integration Center at <http://developer.authorize.net> provides test accounts, sample code, FAQs, and troubleshooting tools.
- + If you can't find what you need in the Integration Center, our Integration Team is available to answer your questions via email at [integration@authorize.net](mailto:integration@authorize.net).
- + Be sure to read our *Developer Security Best Practices White Paper* at <http://www.authorize.net/files/developerbestpractices.pdf> for information on how to maximize the security and reliability of your merchant integration solutions.

If you have any suggestions about how we can improve or correct this guide, please email [documentation@authorize.net](mailto:documentation@authorize.net).

# Section 2

## Executing an API Call

---

The following sections describe the minimum requirements for executing an API call for an ARB subscription request using XML.

There are two options for developing the subscription request script:

- + You may develop a custom script yourself using the API fields information in this section, OR
- + You may use Authorize.Net sample code in C#, Java, PHP, Ruby, and VBNet available for free from our Integration Center at <http://developer.authorize.net/samplecode>.

---

**Note:** If you choose to use Authorize.Net sample code, please be aware that in order to achieve a successful implementation it **must** be modified with the merchant's specific payment gateway account information.

---

### ARB API URLs

ITEM	LOCATION
Production	<a href="https://api.authorize.net/xml/v1/request.api">https://api.authorize.net/xml/v1/request.api</a>
Developer Test	<a href="https://apitest.authorize.net/xml/v1/request.api">https://apitest.authorize.net/xml/v1/request.api</a>
XML Schema	<a href="https://api.authorize.net/xml/v1/schema/AnetApiSchema.xsd">https://api.authorize.net/xml/v1/schema/AnetApiSchema.xsd</a>

In order to be processed successfully, API requests and responses must conform to the ARB API XML schema.

---

**Note:** The Developer Test URL requires the use of a developer test payment gateway account. You can request a test account from our Integration Center at <http://developer.authorize.net/testaccount>. Developer test accounts cannot be used to test against the Production URL.

---

### ARB Subscription Functions

The ARB API includes the following functions:

- + ARBCreateSubscriptionRequest
- + ARBUpdateSubscriptionRequest
- + ARBCancelSubscriptionRequest

Each API submission may contain only one ARB request. Including more than one request per submission will result in an error.

## Authentication

**ALL** calls to the ARB API require merchant authentication. The following table represents the required XML elements. **All XML elements are case sensitive and must be submitted in the order listed here. Optional elements should not be submitted unless they contain valid values.**

ELEMENT	VALUE	FORMAT	NOTES
<b>merchantAuthentication</b>	Contains the merchant's payment gateway account authentication information		
<b>name</b>	The merchant's valid API login ID	Up to 25 characters	Submit the API login ID used to submit transactions.
<b>transactionKey</b>	The merchant's valid transaction key	16 characters	Submit the transaction key obtained by the merchant from the Merchant Interface.

### Example of Authentication with the API Login ID and Transaction Key

```
<?xml version="1.0" encoding="utf-8"?>
<ARBCreateSubscriptionRequest xmlns=
  "AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>mytestacct</name>
    <transactionKey>112223344</transactionKey>
  </merchantAuthentication>
```

**Note:** The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

## Input Elements for ARBCreateSubscriptionRequest

The following table represents the input elements for executing an API call to the ARBCreateSubscriptionRequest function, in addition to the authentication elements. Indentations in the Element column indicate grouping hierarchy. **Elements are required unless otherwise indicated. All XML elements are case sensitive and must be submitted in the order listed here. Optional elements should not be submitted unless they contain valid values.**

ELEMENT	VALUE	FORMAT	NOTES
<b>refId</b>	Merchant-assigned reference ID for the request  <i>Optional</i>	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.

<b>subscription</b>	Contains information about the subscription		
<b>name</b>	Merchant-assigned name for the subscription  <i>Optional</i>	Up to 50 characters	
<b>paymentSchedule</b>	Contains information about the payment schedule		
<b>interval</b>	Contains information about the interval of time between payments		
<b>length</b>	The measurement of time, in association with the Interval Unit, that is used to define the frequency of the billing occurrences	Up to 3 digits  If the Interval Unit is "months," can be any number between one (1) and 12.  If the Interval Unit is "days," can be any number between seven (7) and 365.	
<b>unit</b>	The unit of time, in association with the Interval Length, between each billing occurrence	days, months	
<b>startDate</b>	The date the subscription begins (also the date the initial billing occurs)	YYYY-MM-DD	
<b>totalOccurrences</b>	Number of billing occurrences or payments for the subscription	Up to 4 digits	To submit a subscription with no end date (an ongoing subscription), this field must be submitted with a value of "9999."  If a trial period is specified, this number should include the Trial Occurrences.
<b>trialOccurrences</b>	Number of billing occurrences or payments in the trial period	Up to 2 digits	If a trial period is specified, this number must be included in the Total Occurrences.

	<i>Optional</i>		
<b>amount</b>	The amount to be billed to the customer for each payment in the subscription	Up to 15 digits	If a trial period is specified, this is the amount that will be charged after the trial payments are completed.
<b>trialAmount</b>	The amount to be charged for each payment during a trial period  <i>Conditional</i>	Up to 15 digits	Required when trial occurrences is specified.  Once the number of trial occurrences for the subscription is complete, the regular amount will be charged for each remaining payment.
<b>payment</b>	Contains either the customer's credit card or bank account payment information		
<b>creditCard</b>	Contains the customer's credit card information		This element should only be included when the payment method is credit card.
<b>cardNumber</b>	The credit card number used for payment of the subscription	13 to 16 digits	
<b>expirationDate</b>	The expiration date of the credit card used for the subscription	YYYY-MM	
<b>bankAccount</b>	Contains the customer's bank account information		This element should only be included when the payment method is bank account.
<b>accountType</b>	The type of bank account used for payment of the subscription	checking, businessChecking, savings	
<b>routingNumber</b>	The routing number of the customer's bank	9 digits	
<b>accountNumber</b>	The bank account number used for payment of the subscription	5 to 17 digits	
<b>nameOnAccount</b>	The full name of the individual associated with the bank account number	Up to 22 characters	
<b>echeckType</b>	The type of electronic check transaction used for the subscription	For checking or savings accounts, PPD or WEB  For business checking accounts,	

		CCD	
<b>bankName</b>	The name of the bank associated with the bank account number  <i>Optional</i>	Up to 50 characters	
<b>order</b>	Contains optional order information  <i>Optional</i>		
<b>invoiceNumber</b>	Merchant-assigned invoice number for the subscription  <i>Optional</i>	Up to 20 characters	The invoice number will be associated with each payment in the subscription.
<b>description</b>	Description of the subscription  <i>Optional</i>	Up to 255 characters	The description will be associated with each payment in the subscription.
<b>customer</b>	Contains information about the customer		
<b>id</b>	Merchant-assigned identifier for the customer  <i>Optional</i>	Up to 20 characters	
<b>email</b>	The customer's email address  <i>Optional</i>	Up to 255 characters	
<b>phoneNumber</b>	The customer's phone number  <i>Optional</i>	Up to 25 digits	
<b>faxNumber</b>	The customer's fax number  <i>Optional</i>	Up to 25 digits	
<b>billTo</b>	Contains the customer's billing address information		
<b>firstName</b>	The first name associated with the customer's billing address	Up to 50 characters	
<b>lastName</b>	The last name associated with the customer's billing address	Up to 50 characters	
<b>company</b>	The company associated with the customer's billing	Up to 50 characters	

	address <i>Optional</i>		
<b>address</b>	The customer's billing address <i>Optional</i>	Up to 60 characters	
<b>city</b>	The city of the customer's billing address <i>Optional</i>	Up to 40 characters	
<b>state</b>	The state of the customer's billing address <i>Optional</i>	2 characters Must be a valid state code	
<b>zip</b>	The ZIP code of the customer's billing address <i>Optional</i>	Up to 20 characters	
<b>country</b>	The country of the customer's billing address <i>Optional</i>	Up to 60 characters Must be a valid two-character country code or full country name (spelled in English).	
<b>shipTo</b>	Contains the customer's shipping address information <i>Optional</i>		
<b>firstName</b>	The first name associated with the customer's shipping address	Up to 50 characters	
<b>lastName</b>	The last name associated with the customer's shipping address	Up to 50 characters	
<b>company</b>	The company associated with the customer's shipping address	Up to 50 characters	
<b>address</b>	The customer's shipping address	Up to 60 characters	
<b>city</b>	The city of the	Up to 40	

	customer's shipping address	characters	
<b>state</b>	The state of the customer's shipping address	Up to 40 characters	
<b>zip</b>	The ZIP code of the customer's shipping address	Up to 20 characters	
<b>country</b>	The country of the customer's shipping address	Up to 60 characters  Must be a valid two-character country code or full country name (spelled in English).	

**Example ARBCreateSubscriptionRequest**

```
<?xml version="1.0" encoding="utf-8"?>
<ARBCreateSubscriptionRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>mytestacct</name>
    <transactionKey>112223344</transactionKey>
  </merchantAuthentication>
  <refId>Sample</refId>
  <subscription>
    <name>Sample subscription</name>
    <paymentSchedule>
      <interval>
        <length>1</length>
        <unit>months</unit>
      </interval>
      <startDate>2007-03-15</startDate>
      <totalOccurrences>12</totalOccurrences>
      <trialOccurrences>1</trialOccurrences>
    </paymentSchedule>
    <amount>10.29</amount>
    <trialAmount>0.00</trialAmount>
    <payment>
      <creditCard>
        <cardNumber>4111111111111111</cardNumber>
        <expirationDate>2008-08</expirationDate>
      </creditCard>
    </payment>
    <billTo>
      <firstName>John</firstName>
      <lastName>Smith</lastName>
    </billTo>
  </subscription>
</ARBCreateSubscriptionRequest>
```

---

**Note:** The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available

---

---

for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

---

## Input Elements for ARBUpdateSubscriptionRequest

The input elements for a request to update an ARB subscription are the same as the create an ARB subscription function with the following addition and exceptions. **All XML elements are case sensitive and must be submitted in the order listed here. Optional elements should not be submitted unless they contain valid values.**

- + The subscriptionID of the subscription to be updated must be submitted.

ELEMENT	VALUE	FORMAT	NOTES
subscriptionId	The payment gateway assigned identification number for the subscription	Up to 13 digits	

- + The subscription start date (subscription.paymentSchedule.startDate) may only be updated in the event that no successful payments have been completed.
- + The subscription interval information (subscription.paymentSchedule.interval.length and subscription.paymentSchedule.interval.unit) may not be updated.
- + The number of trial occurrences (subscription.paymentSchedule.trialOccurrences) may only be updated if the subscription has not yet begun or is still in the trial period.
- + All other fields are optional.

### Example ARBUpdateSubscriptionRequest

```
<?xml version="1.0" encoding="utf-8"?>
<ARBUpdateSubscriptionRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>mytestacct</name>
    <transactionKey>112223344</transactionKey>
  </merchantAuthentication>
  <refId>Sample</refId>
  <subscriptionId>100748</subscriptionId>
  <subscription>
    <payment>
      <creditCard>
        <cardNumber>4111111111111111</cardNumber>
        <expirationDate>2010-08</expirationDate>
      </creditCard>
    </payment>
  </subscription>
</ARBUpdateSubscriptionRequest>
```

---

**Note:** The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

---

## Input Elements for ARBCancelSubscriptionRequest

The following table represents the input elements for executing an API call to the ARBCancelSubscriptionRequest function, in addition to the authentication elements. Indentations in the Element column indicate grouping hierarchy. **Elements are required unless otherwise indicated. All XML elements are case sensitive and must be submitted in the order listed here. Optional elements should not be submitted unless they contain valid values.**

ELEMENT	VALUE	FORMAT	NOTES
refID	Merchant-assigned reference ID for the request  <i>Optional</i>		If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
subscriptionId	The payment gateway assigned identification number for the subscription	Up to 13 digits	

### Example ARBCancelSubscriptionRequest

```
<ARBCancelSubscriptionRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>mytestacct</name>
    <transactionKey>112223344</transactionKey>
  </merchantAuthentication>
  <refId>Sample</refId>
  <subscriptionId>100748</subscriptionId>
</ARBCancelSubscriptionRequest>
```

---

**Note:** The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

---

# Section 3

## XML Responses

---

The transaction response from the payment gateway is a set of fields that provides information about the status of a request.

### Responses for Successful Requests

The following sections describe the output elements that are returned for successful API calls.

#### Output Elements for ARBCreateSubscriptionResponse

The following table represents the output elements for a successful API call to the ARBCreateSubscriptionRequest function. Indentations in the Element column indicate grouping hierarchy.

ELEMENT	VALUE	FORMAT	NOTES
<b>refID</b>	Merchant-assigned reference ID for the request	Up to 20 characters	This element is included in the response only if it was included in the request.
<b>messages</b>	Contains information about the results of the request		
<b>resultCode</b>	Contains additional information about the results of the request	Ok	An "Ok" result code indicates that the request was processed and accepted without error.
<b>message</b>	Contains the result code and text		Any messages present are informational only.
<b>code</b>	I00001		
<b>text</b>	Successful		
<b>subscriptionId</b>	The payment gateway assigned identification number for the subscription	Up to 13 digits	

#### Example ARBCreateSubscriptionResponse

```
<?xml version="1.0" encoding="utf-8"?>
<ARBCreateSubscriptionResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <refId>Sample</refId>
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
```

```
<text>Successful.</text>
</message>
</messages>
<subscriptionId>100748</subscriptionId>
</ARBCreateSubscriptionResponse>
```

Once you receive a response from the payment gateway with an “Ok” result code, your subscription has been successfully created. The response will include the subscription ID assigned to that particular subscription. Individual transactions, or payments, for a subscription are generated automatically by the payment gateway according to the designated payment schedule and subscription duration. Each payment will only be viewable in the merchant’s payment gateway account when it is actually generated.

For example, if a new subscription is created with a start date of June 6, with a monthly payment interval, the first payment for the subscription will not be viewable in the merchant’s payment gateway account until June 6. All subsequent payments will be visible on their scheduled date (July 6 payment will be visible on July 6, August 6 on August 6, etc.).

---

**Note:** If you create a new subscription with the first payment scheduled for that same day, the initial payment for the subscription will actually be submitted the next business day.

---

Once each scheduled transaction in a subscription has been submitted, which is usually at 2 AM PST for ARB transactions, the merchant will receive an email from the payment gateway indicating the transaction status.

The merchant can also configure their account in the Merchant Interface to receive the following ARB emails:

- + Daily Transaction Summary.
- + Failed Transaction Notice – sent when a payment in a subscription declines or receives an error response from the processor.
- + Subscription Due for Expiration – sent after the second to last payment in a subscription is submitted, to notify the merchant that the next payment is the final one in the subscription.
- + Credit Card Expiration – sent immediately after the last possible successful payment in a subscription, to notify the merchant that the credit card expiration date will expire before the next scheduled payment in the subscription.
- + Subscription Suspension – sent to notify the merchant that a subscription has been suspended. A subscription will be suspended if the first payment in the subscription is declined, rejected or receives an error response. Additionally, if a subscription is edited, for example payment or shipping information is changed, the subscription will be suspended if the first payment after the edits is declined, rejected or receives an error response.
- + Subscription Termination – sent when a subscription is terminated. If a suspended subscription is not edited to fix the problem that caused the suspension, it will terminate on the next scheduled payment.
- + Subscription Expiration – sent after a subscription has expired. Once expired, a subscription cannot be reactivated. Instead, a new subscription would have to be created.

+

---

**Note:** The Daily Transaction Summary email returns an Excel file in comma separated value (.csv) format. The merchant will receive Successful.csv, Failed.csv or both files.

---

#### To select which ARB emails to receive:

1. Log into the Merchant Interface at <https://secure.authorize.net> or if you have a developer test account, log in at <https://test.authorize.net>
2. Click **User Administration** under Account in the main menu on the left
3. Select the user you would like to edit and click **Edit User**
4. Click **Edit Profile Information** under Profile and Security Settings
5. Under the Automated Recurring Billing (ARB) Emails section, click to select or deselect which emails the user should receive
6. Click **Submit** to save the changes

For more information on viewing subscriptions in the Merchant Interface or on the types of ARB emails the merchant can opt to receive, please see the Merchant Interface Online Help Files.

### Transaction Response for Individual Payments in a Subscription

The payment gateway sends an email to the merchant for each transaction submitted in a subscription, indicating the transaction's status. If you and the merchant would like to receive a response in name/value pair format for each payment submitted, in addition to the email, you may use the Silent Post URL feature in the Merchant Interface. When this feature is enabled, the payment gateway will post a transaction response to the URL specified in the Silent Post field of the Merchant Interface. The Silent Post URL feature is the only way you can receive a name/value pair response for payments in an ARB subscription.

The Silent Post feature does not happen in real time. The post will occur when the ARB transactions are submitted, which is usually around 2 AM PST. Because the post does not occur while an SSL connection is established, ARB transactions use an MD5 Hash calculation to validate each transaction response. If you do not have the Silent Post feature enabled, the MD5 Hash information below is not applicable.

### Using the MD5 Hash Feature

The MD5 Hash feature enables you to authenticate that a transaction response is securely received from Authorize.Net. The payment gateway creates the MD5 Hash using the following pieces of account and transaction information as input:

- MD5 Hash value
- Transaction ID (*x\_trans\_id*)
- Amount (*x\_amount*)

The MD5 Hash value is a random value configured by the merchant in the Merchant Interface. It should be stored securely separately from the merchant's Web server. For more information on how to configure this value, see the *Merchant Integration Guide* at <http://www.authorize.net/support/Merchant/default.htm>.

For example, if the MD5 Hash value configured by the merchant in the Merchant Interface is “wilson,” and the transaction ID is “987654321” with an amount of \$1.00, then the field order used by the payment gateway to generate the MD5 Hash would be as follows:

```
wilson9876543211.00
```

---

Note: The value passed back for *x\_amount* is formatted with the correct number of decimal places used in the transaction. For transaction types that do not include a transaction amount, mainly Voids, the amount used by the payment gateway to calculate the MD5 Hash is “0.00.”

---

To authenticate the MD5 Hash returned by the payment gateway in the transaction response, you will need to create a script that can receive and parse the transaction response, call the merchant’s MD5 Hash value, and run the MD5 algorithm on the same fields listed above. If the result matches the MD5 Hash returned by the payment gateway, the transaction response is successfully authenticated.

**IMPORTANT:** When the Silent Post URL feature is enabled, responses for both ARB transactions *and* all other regular transactions will post to the specified URL. To determine which transaction responses are for ARB transactions, you can parse the response for the *x\_subscription\_id* (Subscription ID) and the *x\_subscription\_paynum* (Payment Number) fields. These fields are only returned in the response for individual payments from an ARB subscription.

For information on how to configure the Silent Post URL in the Merchant Interface, see the *Merchant Integration Guide* at <http://www.authorize.net/support/Merchant/default.htm>.

## Output Elements for ARBUpdateSubscriptionResponse and ARBCancelSubscriptionResponse

The output elements in for ARBUpdateSubscriptionResponse and ARBCancelSubscriptionResponse are the same as ARBCreateSubscriptionResponse with the following exception:

- + The subscriptionID of the updated subscription is not included in the response.

## Error Response

The following table describes the output elements for an error response to any of the requested API methods.

ELEMENT	VALUE	FORMAT	NOTES
<b>refID</b>	Merchant-assigned reference ID for the request	Up to 20 characters	This element is included in the response only if it was included in the request.
<b>messages</b>	Contains information about the results of the request		
<b>resultCode</b>	Contains additional information about the results of the request	Error	The request resulted in one or more errors.
<b>message</b>	Contains the result		Messages provide more details

	code and text		about the error(s).
<b>code</b>	The code that represents the reason for the error		
<b>text</b>	A text description of the error		

### Example Error Response

```
<?xml version="1.0" encoding="utf-8"?>
<ErrorResponse xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Error</resultCode>
    <message>
      <code>E00003</code>
      <text>An error occurred while parsing the XML request.
    </text>
    </message>
  </messages>
</ErrorResponse>
```

### Error Codes

The following table lists the common error codes and texts.

CODE	TEXT	DESCRIPTION
E00001	An error occurred during processing. Please try again.	An unexpected system error occurred while processing this request.
E00002	The content-type specified is not supported.	The only supported content-types are text/xml and application/xml.
E00003	An error occurred while parsing the XML request.	This is the result of an XML parser error.
E00004	The name of the requested API method is invalid.	The name of the root node of the XML request is the API method being called. It is not valid.
E00005	The merchantAuthentication.transactionKey is invalid or not present.	Merchant authentication requires a valid value for transaction key.
E00006	The merchantAuthentication.name is invalid or not present.	Merchant authentication requires a valid value for name.
